Profile

A MS SQL centric Analytics Engineer looking to progress into Senior Analytics Engineering / Data Engineering roles. I bring strong experience designing production-grade data solutions, automation, and ERP-integrated systems with deep expertise in SQL Server performance tuning, data modelling, and backend analytics, with hands-on experience across Linux, PostgreSQL, Docker, orchestration, and modern analytics tooling.

Technical Skills

Data Engineering and Analytics Engineering

- Advanced T-SQL including Window Functions, Dynamic SQL, and Query Optimisation
- Data Warehousing and Dimensional Modelling using Kimball methodologies
- ETL and Data Pipelines built with SSIS and Python
- dbt Core (hands on platform exploration and learning)
- Containerised Dagster for local orchestration (hands on platform exploration and learning)

Databases and Platforms

- Microsoft SQL Server in production on-prem environments
- PostgreSQL self-managed on Ubuntu Server
- End-to-end ERP integration (SAP Rise)
- Qlik Sense enterprise deployment and administration

Infrastructure and Operations

- Windows Server fundamentals supporting analytics platforms (IIS, SSL certificates, DNS, TCP/IP, Active Directory)
- Docker fundamentals
- Linux (Ubuntu Server) fundamentals
- Production support and non-network on-call responsibilities for data and analytics platforms

Experience

Senior BI Data Analyst / Analytics Engineer – *Unipart Group Limited*

2022 to present

I design, optimise, and maintain production SQL-based data solutions underpinning business-critical analytics and operational processes. I build and refactor performant data models and transformations supporting reporting, automation, and ERP workflows. I develop ETL and automation using SSIS, Python, and SQL Server, integrating analytics directly into business processes.

I administer and support production BI and data platforms including Qlik Sense and SQL Server, and act as the organisational SME for SQL performance, Data Modelling, and backend analytics design, and own and deliver most of our high-profile, business-critical reporting across Sales, Margin, Invoiced Sales, OTIF, Backorders, and Quote Conversion.

Engineering and Automation Highlights

Master Data Management System

I engineered a metadata-driven master data management and data quality framework using dynamic SQL to validate master data across multiple business domains. The system implemented stateful tracking of violations with ownership, lifecycle, and resolution metrics, enabling scalable governance and visibility of data quality issues.

SAP Rise OTIF Automation

Designed a SQL-based exception detection system using table-valued functions to identify Sales Orders exempt from two-day OTIF liability. I integrated this logic directly into SAP via SSIS BAPI calls, automatically updating delivery dates on live Sales Orders. This eliminated a three hour per day manual process in Customer Services while directly influencing customer delivery outcomes, delivering a clean, deterministic, and auditable automation integrated with core ERP workflows.

Analytics Platform Enablement (Qlik Sense)

Designed and delivered a secure external-facing Qlik Sense architecture enabling governed write-back into core data systems by implementing Vizlib Writeback to support operational workflows directly from Qlik Apps. This includes a multi-proxy, DMZ-based architecture with secure traffic routing to support external access without compromising internal platform integrity. I own the end-to-end production configuration and operational reliability of the analytics platform.

Customer Communications Automation

Built a resilient SQL-driven email delivery system for Order Acknowledgements using formatted HTML. The solution was designed for idempotency, batching, and crash recovery, preventing duplicate sends and SMTP overload, and improving customer experience without additional enterprise tooling costs.

Education

BSc Mathematics (*University of Leeds*)

A*, B, B at A-Level in Mathematics, Further Mathematics, and Statistics
